

Digitizing of Cultural Heritage

From the digitizing department
of **EXON** company in Pilsen

We can convert your valuable archival materials into digital format:

- Valuable and very old materials
- Maps, books and chronicles
- Archives and museum collections
- Drawing and illustrations
- Originals of all types and sizes

We use book scanners:

- From i2S (Bordeaux, France), the industry leader in the manufacture of high-quality scanners.
- With book cradles that are gentle on the bindings of originals, and optimized glass pressure settings for sensitive scanning.
- With special holders for cradling antique or fragile bindings.

Originals are re-created digitally by a non-contact scanning method, without ultraviolet and infrared radiation.

The resulting image is of the highest quality and meets the most demanding requirements.

Our scanners can also digitize originals from microfilm and slides.
